Any use for advertising purposes must be granted in writing. This technical report may only be quoted in full. This report is the result of a single examination of the object in question and is not generally applicable evaluation of the quality of other products in regular production. For further details, please see testing and certification regulation, chapter A-3.4.

Unless otherwise agreed upon, Pass or Fail conformity statements are given based on the measured values by comparison with the provided customer requirements without any considerations of measurement uncertainties. The decision rule "Binary statement for simple acceptance" according to ILAC-G8:09/2019 is applied, so the risk of false accept (Pass) as well as false reject (Fail) can be up to 50%. The expanded measurement uncertainties of the tested parameters are less than 1/3 of the provided customer requirements. Exemptions are marked (#).

Tests marked (*) are out of DIN EN ISO/IEC 17025 accreditation scope. Tests marked (†) were subcontracted to a qualified partner laboratory.

The submitted samples are not drawn by the laboratory.

The testing of mixed samples is carried out by the customer's request and may imply a deviation from the testing standard. If the test result of the mixed sample is below the limit, the test result of the individual samples may exceed the limit. In this case, testing of the individual samples is recommended.

The stated reporting limits are verified by statistically determined limits of quantification (LOQ).
